this preface tells the story of how multimodal usability responds to a special challenge chapter 1 describes the goals and structure of this book the idea of describing how to make multimodal computer systems usable arose in the european network of excellence similar taskforce for creating human machine interfaces similar to human human communication 2003 2007 similar cc similar brought together people from multimodal signal processing and usability with the aim of

creating enabling technologies for new kinds of multimodal systems and demonstrating results in research prototypes most of our colleagues in the network were in fact busy extracting features and guring out how to demonstrate progress in working interactive systems while claiming not to have too much of a notion of usability in system development and evaluation it was proposed that the authors support the usability of the many multimodal pro types underway by researching and presenting a methodology for building usable multimodal systems we accepted the challenge rst and foremost no doubt because the formidable team spirit in similar could make people accept outrageous things second h ing worked for nearly two decades on making multimodal systems usable we were curious curious at the opportunity to try to understand what happens to traditional usability work that is work in human computer interaction centred around tra tional graphical user interfaces guis when systems become as multimodal and as advanced in other ways as those we build in research today

recent years have seen the proliferation of new computer designs that employ parallel processing in one form or another in order to achieve maximum performance although the idea of improving the performance of computing machines by carrying out parts of the computation concurrently is not new indeed the concept was known to babbage such machines have until fairly recently been confined to a few specialist research laboratories nowadays parallel computers are commercially available and they are finding a wide range of applications in chemical calculations the purpose of this volume is to review the impact that the advent of concurrent computation is already having and is likely to have in the future on chemical calculations although the potential of concurrent computation is still far from its full realization it is already clear that it may turn out to be second in importance only to the introduction of the electronic digital computer itself
