volume 13 of this important series continues in the tradition of its widely received predecessors presenting current advances and results in solvent extraction contains nearly 800 helpful drawings tables equations and bibliographic citations

this classic text first published in 1911 provides a detailed overview of the various processes involved in extracting gold from ore using electrolytic methods written by the noted metallurgist cromwell bartlett dickey the book is divided into several sections covering topics such as the chemistry of gold extraction the advantages and disadvantages of different methods and the equipment and apparatus needed for the process with its clear detailed explanations and expert insights this book remains an important resource for anyone interested in the science of gold mining this work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it this work is in the public domain in the united states of america and possibly other nations within the united states you may freely copy and

distribute this work as no entity individual or corporate has a copyright on the body of the work scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public we appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

new discoveries of the properties of gold at a nanoscale and its effective use in modern technologies have been driving a virtual gold rush depleting natural resources has meant that the recovery of gold continues to grow in importance and relevance the recovery of gold from secondary sources analyses the most advanced technology in gold recovery and recycling from spent sources of mobile phones unwanted electronic equipment and waste materials state of the art techniques of hydrometallurgical and bio metallurgical processing leaching cementing adsorbing and separation through bio sorbents are all described in detail providing a guide for students and researchers discussion of environmentally friendly methods of recovery are presented in order to provide modern day alternatives to previous techniques for those interested in the study of gold recovery this book gives a comprehensive overview of current recovery making it the ultimate source of information for students researchers chemists metallurgists environmental scientists and electronic waste recovery experts

solvent extraction in flame spectroscopic analysis provides an introductory discussion on the technique of solvent extraction in flame spectrometry the book is comprised of six chapters the cover the various aspects and applications of solvent extraction the text first covers the role of solvent extraction in flame spectrometric analysis and then proceeds to describing the solvent suitable for flame spectrometry next the book discusses the theoretical and practical aspects of the solvent extraction technique the text also covers the application of the technique on various elements the book will be of great use to researchers and professionals who require a good understanding of the various techniques in spectrometry

oxidation procedures based on the chlorine hypochlorite system were investigated for improving gold recovery from carbonaceous gold ores the oxidation pretreatment prior to cyanidation was accomplished by 1 addition of sodium hypochlorite to ore pulp 2 by addition of chlorine to ore pulp and 3 by generation of hypochlorite in situ by electrolysis of a brine solution used to the ore gold extraction of 90 pct was achieved by cyanidation of carbonaceous ore that had been pretreated with 20 lb per ton sodium hypochlorite at 50 c for 4 hours similarly pretreatment of the ore pulp with 35 lb chlorine per ton at 24 to 30 c and 15 hours reaction time resulted in 89 pct gold extraction by subsequent cyanidation concomitant studies showed that electrolyzing the pulp prepared with a brine solution was equally as effective as electrolyzing hypochlorite and chlorine for oxidizing carbonaceous ore constituents that are deleterious to cyanidation gold extraction of 90 pct was obtained by electrolysis when 275 lb of ore was treated at 200 amp for 7 hours in an 8 to 10 pct salt solution power consumption was in the range of 60 kwhr per ton

e waste is a popular informal name for electronic products nearing the end of their useful life computers televisions vcrs stereos copiers and fax machines are common electronic products many of these products can be reused refurbished or recycled this is a book on the five different methods of reclaiming gold from electronic e waste using only every day at home chemicals to

extract gold and other precious metals from the currently plentiful sources available thru the reclaiming of the endless

this work presents an up to date account of some of the fundamental aspects of liquid liquid extraction technology together with an account of extraction processes in a number of important industries

extensively revised and updated this edition provides the broad base of knowledge required by all working in the gold extraction and gold processing industries it bridges the gap between research and industry by emphasizing practical applications of chemical principles and techniques
