this book aims to quantify and discuss how societies have directly and indirectly benefited from ecosystem services in patagonia not only in terms of provisioning and cultural services but also regulating and supporting services patagonia a region that stretches across two countries ca 10

in Chile and 90 in Argentina is home to some of the most extensive wilderness areas on our planet. Natural grasslands comprise almost 30% of the Americas, including the Patagonian steppe, while Patagonian southern temperate forests are important for carbon sequestration and storage. They play a pivotal role in water regulation and have become widely recognized for their ecotourism value. However, profound changes are now underway that could affect key ecosystem functions and ultimately human well-being. In this context, one major challenge we face in Patagonia is that ecosystem services are often ignored in economic markets, government policies, and land management practices. The book explores the synergies and trade-offs between conservation and economic development as natural landscapes and seascapes continue to degrade. In Patagonia, historically, economic markets have largely focused on provisioning services (forest products, livestock) while neglecting the interdependent roles of regulating services (erosion and climate control), supporting services (nutrient cycling), and cultural services (recreation, local identity, tourism). Therefore, the present work focuses on ecosystem functions and ecosystem services as well as on trends in biodiversity and the interactions between natural environments and land use activities throughout Patagonia.
