have you ever experienced a decision situation that was hard to come to grips with did you ever feel a need to improve your decision making skills is this something where you feel that you have not learned enough practical and useful methods in that case you are not alone even though decision making is both considered and actually is a very important skill in modern work life as well as in private life these skills are not to any reasonable extent taught in schools at any level no wonder many people do indeed feel the need to improve but have a hard time finding out how this book is an attempt to remedy this shortcoming of our educational systems and possibly also of our common partly intuition based decision culture intuition is not at all bad quite the contrary but it has to co exist with rationality we will show you how methods for decision making should be of prime concern to any individual or organisation even if the decision processes are not always explicitly or even consciously formulated all kinds of organisations as well as individuals must continuously make decisions of the most varied nature in order to prosper and attain their objectives a large part of the time spent in any organisation not least at management levels is spent gathering processing and compiling information for the purpose of making decisions supported by that information the same interest has hitherto not been shown for individual decision making even though large gains would also be obtained at a personal level if important personal decisions were better deliberated this book aims at changing that and thus attends to both categories of decision makers this book will take you through a journey starting with some history of decision making and analysis and then go through easy to learn ways of structuring decision information and methods for analysing the decision situations beginning with simple decision situations and then moving on to progressively harder ones but never losing sight of the overarching goal that the reader should be able to follow the progression and being able to carry out similar decision analyses in real life situations the open access version of this book available at taylorfrancis.com has been made available under a creative commons attribution non commercial no derivatives 4 0 license

die enzyklopädie philosophie und wissenschaftstheorie das größte allgemeine nachschlagewerk zur philosophie im deutschsprachigen raum wurde 1980 begonnen

und 1996 mit dem vierten band abgeschlossen sie erschien 2005 bis 2018 in einer komplett aktualisierten und erweiterten 8 bändigen neuauflage die hiermit nun in einer kartonierten sonderausgabe vorliegt die enzyklopädie umfasst in sach und personenartikeln nicht nur den klassischen bestand des philosophischen wissens sondern auch die neuere entwicklung der philosophie insbesondere in den bereichen logik erkenntnis und wissenschaftstheorie sowie sprachphilosophie zugleich finden grundlagenreflexionen in den wissenschaften und deren geschichte ausführliche berücksichtigung die umfassenden bibliographien und werkverzeichnisse wurden für die 2 auflage in allen artikeln auf den neuesten stand gebracht

we make choices all the time about trivial matters about how to spend our money about how to spend our time about what to do with our lives and we are also constantly judging the decisions other people make as rational or irrational but what kind of criteria are we applying when we say that a choice is rational what guides our own choices especially in cases where we don't have complete information about the outcomes what strategies should be applied in making decisions which affect a lot of people as in the case of government policy this book explores what it means to be rational in all these contexts it introduces ideas from economics philosophy and other areas showing how the theory applies to decisions in everyday life and to particular situations such as gambling and the allocation of resources about the series the very short introductions series from oxford university press contains hundreds of titles in almost every subject area these pocket sized books are the perfect way to get ahead in a new subject quickly our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

at the core of the many debates throughout cognitive science concerning how decisions are made are the processes governing the time course of preference formation and decision from perceptual choices such as whether the signal on a radar screen indicates an enemy missile or a spot on a ct scan indicates a tumor to cognitive value based decisions such as selecting an agreeable flatmate or deciding the guilt of a defendant significant and everyday decisions are dynamic over time phenomena such as decoy effects preference reversals and order effects are still puzzling researchers for example in a legal context jurors receive discrete pieces of evidence in sequence and must integrate these pieces together to reach a singular verdict from a standard bayesian viewpoint the order in which people

receive the evidence should not influence their final decision and yet order effects seem a robust empirical phenomena in many decision contexts current research on how decisions unfold especially in a dynamic environment is advancing our theoretical understanding of decision making this research topic aims to review and further explore the time course of a decision from how prior beliefs are formed to how those beliefs are used and updated over time towards the formation of preferences and choices and post decision processes and effects research literatures encompassing varied approaches to the time scale of decisions will be brought into scope a speeded decisions and post decision processes that require the accumulation of noisy and possibly non stationary perceptual evidence e g randomly moving dots stimuli within a few seconds with or without temporal uncertainty b temporally extended value based decisions that integrate feedback values e g gambling machines and internally generated decision criteria e g when one switches attention selectively between the various aspects of several choice alternatives c temporally extended belief based decisions that build on the integration of evidence which interacts with the decision maker s belief system towards the updating of the beliefs and the formation of judgments and preferences as in the legal context research that emphasizes theoretical concerns including optimality analysis and mechanisms underlying the decision process both neural and cognitive is presented as well as research that combines experimental and computational levels of analysis

in the years since it first published neuroeconomics decision making and the brain has become the standard reference and textbook in the burgeoning field of neuroeconomics the second edition a nearly complete revision of this landmark book will set a new standard this new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline the first of these sections provides useful introductions to the disciplines of microeconomics the psychology of judgment and decision computational neuroscience and anthropology for scholars and students seeking interdisciplinary breadth the second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems chapters on risk time preferences social preferences emotion pharmacology and common neural currencies each written by leading experts lay out the foundations of neuroeconomic thought the third

section contains both overview and in depth chapters on the fundamentals of reinforcement learning value learning and value representation the fourth section the neural mechanisms for choice integrates what is known about the decision making architecture into state of the art models of how we make choices the final section embeds these mechanisms in a larger social context showing how these mechanisms function during social decision making in both humans and animals the book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field a clear explanatory style and a single expository voice characterize all chapters making core issues in economics psychology and neuroscience accessible to scholars from all disciplines the volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general editors and contributing authors are among the acknowledged experts and founders in the field making this the authoritative reference for neuroeconomics suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers introductory chapters on economics psychology neuroscience and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field detailed chapters on subjects that include reinforcement learning risk inter temporal choice drift diffusion models game theory and prospect theory make this an invaluable reference published in association with the society for neuroeconomics neuroeconomics.org full color presentation throughout with numerous carefully selected illustrations to highlight key concepts
