in the molecular sciences enzyme chemistry occupies a special niche as one of the major contact points between chemical and biological

disciplines the special properties of enzymes as selective and efficient catalysts are so central to current challenges to chemists that the development of enzyme chemistry in the past thirty years has been a major stimulus to chemical research in general on the one hand studies of the intrinsic properties of enzymes and on the other hand their applications to synthesis drug design and biosynthesis have had an immense impact this book brings together in one volume essays describing several such fields with emphasis on the applications it would be unnecessarily repetitious to outline the approach and contents of the book in a preface the first short chapter is more eloquent than a formal preface can be i shall therefore encourage you to begin with the introduction in chapter 1 and here i wish to extend my warm thanks to those who have contributed to the production of this book the authors for their acceptance of the overall concept of the book and for the thoughtfulness of their writing dr charles suckling frs and professor hamish wood for their constructive criticism of the whole book and dr john buckingham and his colleagues at chapman and hall for their efficiency and enthusiasm in transforming the typescripts into the book that you now hold colin j suckling university of strathclyde contributors donald h

as the first edition of this book was going through the publication process a revolution was taking place in the technologies available for the study of enzymes the techniques of molecular biology especially in genetic engineering of organisms and in site specific mutagenesis of genes were established and were being brought into use to solve many problems in in enzymology added to these fundamental and applied science not least advances the possibility of generating catalysts from antibodies has become a topic of major interest these major

innovations have changed the emphasis of much bioorganic research whereas in the past the protein was often the sleeping partner in a study its detailed function is now the major focus of scientific interest similarly in industry the potential of genetically manipulated organisms to satisfy the needs for the production of chemicals and foodstuffs has been widely recognised the second edition of enzyme chemistry impact and applications takes on board these new developments whilst maintaining the overall aims and views of the first edition many of the chapters have been completely rewritten to take account of advances in the last five years especially with regard to the impact of biologically based technologies although the book continues to approach its subject matter from the point of view of the chemist the increased interdisciplinary content of much modern science will be obvious from the discussion
