this book approaches the design of functionally superior optoelectronic devices through the use of bio inspired nanostructures and multiscale material structures through a step by step approach the book combines both the fundamental theoretical concepts involved in understanding and numerically modelling optoelectronic devices and the application of such methods in addressing challenging research problems in nanostructured optoelectronic design and fabrication the book offers comprehensive content in optoelectronic materials and engineering and can be used as a reference material by researchers in nanostructured optoelectronic design

the term neuromechanics defines an integrative approach that combines the neuromuscular control and the biomechanical aspects of physical behavior in humans and animals crucial to this approach is a detailed description and modeling of the interaction between the nervous system and the controlled biomechanical plant only then do we have the broader context within which to understand evolution movement mechanics neural control energetics disability and rehabilitation in addition to enabling new basic science directions understanding the interrelations between movement neural and mechanical function should also be leveraged for the development of personalized wearable technologies to augment or restore the motor capabilities of healthy or impaired individuals similarly this understanding will empower us to revisit current approaches to the design and control of robotic and humanoid systems to produce truly versatile human like physical behavior and adaptation in real world environments this research topic is therefore poised at an opportune moment to promote understanding of apparently disparate topics into a coherent focus
