making a decision of any importance is never simple on the one hand specialists in decision theory do not come within the reach of most policy makers and secondly there are very few books on pragmatic decision that are not purely anecdotal in addition there is virtually no book that provides a link between decision making and action this book provides a bridge between the latest results in artificial intelligence neurobiology psychology and decision making for action what is the role of intuition or emotion what are the main psychological biases of which we must be wary how can we avoid being manipulated what is the proper use of planning how can we remain rational even if one is not an expert in probabilities perhaps more importantly for managers how does one go from decision to action so many questions fundamental to the practice of decision making are addressed this book dissects all issues that arise almost daily for decision makers at least for major decisions drawing on numerous examples this book answers in plain language and imagery all your questions the final chapter takes the form of a brief reminder everything you have to remember to be a good decision maker

this book collects a wide range of the most important writing on decision making by one of europe s leading organization theorists brought together in one volume for the first time with an introduction from the author

building on lecture notes from his acclaimed course at stanford university james march provides a brilliant introduction to decision making a central human activity fundamental to individual group organizational and societal life march draws on research from all the disciplines of social and

behavioral science to show decision making in its broadest context by emphasizing how decisions are actually made as opposed to how they should be made he enables those involved in the process to understand it both as observers and as participants march sheds new light on the decision making process by delineating four deep issues that persistently divide students of decision making are decisions based on rational choices involving preferences and expected consequences or on rules that are appropriate to the identity of the decision maker and the situation is decision making a consistent clear process or one characterized by ambiguity and inconsistency is decision making significant primarily for its outcomes or for the individual and social meanings it creates and sustains and finally are the outcomes of decision processes attributable solely to the actions of individuals or to the combined influence of interacting individuals organizations and societies march s observations on how intelligence is or is not achieved through decision making and possibilities for enhancing decision intelligence are also provided march explains key concepts of vital importance to students of decision making and decision makers such as limited rationality history dependent rules and ambiguity and weaves these ideas into a full depiction of decision making he includes a discussion of the modern aspects of several classic issues underlying these concepts such as the relation between reason and ignorance intentionality and fate and meaning and interpretation this valuable textbook by one of the seminal figures in the history of organizational decision making will be required reading for a new generation of scholars managers and other decision makers

decisions and problems can often leave people with a dilemma knowing that a decision is required but uncertain how to ensure that it is the best one and that it will be successfully executed the paradox is that the very pressure for a decision often breeds indecisiveness think on your feet

addresses this fundamental problem enabling you to find the best solutions and options avoid pitfalls managerisk work with people to ensure that decisions succeed and understand how you can improve the way you typically operate when making decisions

the authors are highly respected as leading figures in the field of judgment and decision making there are many existing books on topics related to judgment and decision making but this book makes a unique contribution to this field because of its systematic and scholarly approach and its breadth of coverage robert goldstone indiana university reid hastie and robyn dawes are two of the most eminent researchers in the field i know these authors to be excellent writers and i have no doubt that their writing style will be suitable for my students william goldstein university of chicago in the new edition of this award winning text renowned authors reid hastie and robyn dawes compare and contrast the basic principles of rationality with actual behavior in making decisions this book explores theories and research findings from the field of judgment and decision making in a non technical manner using anecdotes as a teaching device intended as an introductory textbook for advanced undergraduate and graduate students the material not only is of scholarly interest but is practical as well new to this edition chapter introductions conclusions and cross references between chapters make the text more student friendly an abundance of examples from areas such as finance medicine law and engineering anchor concepts to the real world increased consideration of descriptive psychological models of decision making augment the original emphasis on normative rational expected utility theory models bring the book up to date balance among the three major approaches to judgment and decision making cognitive psychological analyses of mental processes and heuristics descriptive algebraic models of judgment and decision processes and rational models of decision making

today's world is complex and getting more so each day huge multinational corporations international crisis and fast breaking events require most people to make decisions on a daily basis without the tools to understand the long term impact that today's decision might create because most people have never really been trained in how to make important complex decisions most people rely on experience and gut reaction which is okay for many decisions but not okay for decision that will have meaningful impact on organizations and individual decision makers need to develop the art and science of strategic decision making here professor thomas martin explains the need for decision makers to modify their thinking about how they deal with acquiring and analyzing information in each of the decision making process steps this approach requiring thinking modification will lengthen the process make it more complex and to some more arduous but the comprehensiveness of the new thinking approach should lead to improved and more effective decision making in this book dr martin presents a thinking modification framework that asserts that in the decision making process there are three situational states a current state future state and a transitional state that one must deliberate in finding a solution for each of these situational states martin develops an identical five step process to determine the best decision to make the steps of this process include change needing situational analysis challenge framing causal analysis generating solution ideas choosing a solution set implementation and aftermath planning this book will appeal to decision makers leaders and students of management who want a specific framework that details the process behind making strategic well informed decisions

why do the people in some companies continually dazzle us with their brilliant decisions while those in others make one blunder after another do they understand their businesses better are they just plain smarter or is it all a matter of luck the answer says j frank yates is none of the above the

real key rarely recognized is how the leaders manage the company's decision processes the leaders decision management practices drawing on his thirty years of research and experience as well as scholarship from psychology economics statistics strategy medicine and other fields to explain the fundamental nature of business decision problems yates highlights the ten cardinal decision issues crucial to managing the decision making process and ultimately better company decisions he covers problems ranging from recognizing whether a decision is actually called for to assuring that a preferred course of action will be implemented he shows how solid decisions result when managers ensure that deciders resolve every cardinal issue effectively for every decision problem facing the company he also reveals how conversely chronically poor decisions are traceable to managers allowing or even creating conditions that encourage deciders to fall short in how they address at least one of those critical issues

at the core of the many debates throughout cognitive science concerning how decisions are made are the processes governing the time course of preference formation and decision from perceptual choices such as whether the signal on a radar screen indicates an enemy missile or a spot on a ct scan indicates a tumor to cognitive value based decisions such as selecting an agreeable flatmate or deciding the guilt of a defendant significant and everyday decisions are dynamic over time phenomena such as decoy effects preference reversals and order effects are still puzzling researchers for example in a legal context jurors receive discrete pieces of evidence in sequence and must integrate these pieces together to reach a singular verdict from a standard bayesian viewpoint the order in which people receive the evidence should not influence their final decision and yet order effects seem a robust empirical phenomena in many decision contexts current research on how decisions unfold especially in a dynamic environment is advancing our

theoretical understanding of decision making this research topic aims to review and further explore the time course of a decision from how prior beliefs are formed to how those beliefs are used and updated over time towards the formation of preferences and choices and post decision processes and effects research literatures encompassing varied approaches to the time scale of decisions will be brought into scope a speeded decisions and post decision processes that require the accumulation of noisy and possibly non stationary perceptual evidence e g randomly moving dots stimuli within a few seconds with or without temporal uncertainty b temporally extended value based decisions that integrate feedback values e g gambling machines and internally generated decision criteria e g when one switches attention selectively between the various aspects of several choice alternatives c temporally extended belief based decisions that build on the integration of evidence which interacts with the decision maker s belief system towards the updating of the beliefs and the formation of judgments and preferences as in the legal context research that emphasizes theoretical concerns including optimality analysis and mechanisms underlying the decision process both neural and cognitive is presented as well as research that combines experimental and computational levels of analysis

this text written by a philosopher and a social psychologist emphasizes concrete applications of decision research to problems of everyday living as well as to business social and political issues the text contains scores of interesting examples and problems for analysis ranging from personal decisions about medical treatment to truman s decision to use the atomic bomb there is no other text with such a wide ranging coverage with so practical an orientation with such clear descriptions of the steps to effective decision making and with so many end of chapter problems for analysis and practice

using real world examples moody s simple nontechnical descriptions make even the most sophisticated decision techniques easy to grasp and apply includes descriptions of brainstorming the delphi technique force field analysis utility theory and more 67 illustrations

mental health professionals routinely make treatment decisions without necessarily having an overarching perspective about optimal next steps this important new book provides them with reader friendly pragmatic strategies to approach clinical problems as testable hypotheses it discusses how to apply concepts based on decision analytic theory using risk benefit analyses contingency planning measurement based care shared decision making pharmacogenetics disease staging and machine learning readers will learn how these tools can help them craft optimal pharmacological and psychosocial interventions tailored to the needs of an individual patient the book covers topics such as diagnostic ambiguity interview technique applying statistical concepts to individual patients artificial intelligence and managing high risk treatment resistant or demanding and difficult patients valuable clinical vignettes are featured throughout the book to illustrate common dilemmas and scenarios where the relative merits of competing treatment options invite a more iterative than definitive approach for all healthcare professionals who prescribe psychotropic medications

this book describes the new perspective of naturalistic decision making the point of departure is how people make decisions in complex time pressured ambiguous and changing environments the purpose of this book is to present and elaborate on past models developed to explain this type of decision making the central philosophy of the book is that classical decision theory has been unproductive since it is so heavily grounded in economics and mathematics the contributors

believe there is little to be learned from laboratory studies about how people actually handle difficult and interesting tasks therefore the book presents a critique of classical decision theory the models of naturalistic decision making described by the contributors were derived to explain the behavior of firefighters business people jurors nuclear power plant operators and command and control officers the models are unique in that they address the way people use experience to frame situations and adopt courses of action the models explain the strengths of skilled decision makers naturalistic decision research requires the examination of field settings and a section of the book covers methods for conducting meaningful research outside the laboratory in addition since his approach has applied value the book covers issues of training and decision support systems

how do we make the judgments that inform our lives is there any way of consciously removing bias from the choices we make what do our everyday personal decisions have in common with those made by groups companies and even nations in this engaging and innovative textbook nancy kim presents a multidisciplinary introduction to the dynamic field of judgment and decision making this lucidly written text delivers insights from cognitive psychology aptly combining with interdependent findings from fields as diverse as neuropsychology behavioural economics social developmental and clinical psychology and philosophy offering not only a comprehensive explanation of the neurological structures and cognitive processes that underlie how we make decisions and form judgments in our everyday lives readers can expect to learn the implications of these decisions upon an individual s prospects for health and longevity understanding behaviour is a central aspect of inquiry in the psychology discipline and as such this book is an essential companion for students taking undergraduate psychology cognitive psychology and cognitive neuroscience courses particularly those which include a module in judgment and decision making

this text may also be helpful for undergraduate and postgraduate business courses on the subject accompanying online resources for this title can be found at [bloomsburyonlineresources.com](http://bloomsburyonlineresources.com) judgment and decision making these resources are designed to support teaching and learning when using this textbook and are available at no extra cost

the analysis of decision making under uncertainty has again become a major focus of interest this volume presents contributions from leading specialists in different fields and provides a summary and synthesis of work in this area it is based on a conference held at the harvard business school the book brings together the different approaches to decision making normative descriptive and prescriptive which largely correspond to different disciplinary interests mathematicians have concentrated on rational procedures for decision making how people should make decisions psychologists have examined how people do make decisions and how far their behaviour is compatible with any rational model operations researchers study the application of decision models to actual problems throughout the aim is to present the current state of research and its application and also to show how the different disciplinary approaches can inform one another and thus lay the foundations for the integrated analysis of decision making the book will be of interest to researchers teachers for use as background reading for a decision theory course students and consultants and others involved in the practical application of the analysis of decision making it will be of interest to specialists and students in statistics mathematics economics psychology and the behavioural sciences operations research and management science

there are basically two categories of books on decision making one tells stories of how intuition guides decision making the other delineates a formal approach based on decision trees or matrices

often impenetrable to real life decision makers this book combines the best elements of both perspectives in a way that can be easily understood by all who are struggling with complex decisions either as individuals or as organisations it demonstrates how intuition and psychological insights can be harnessed to design relevant models and decision strategies and describes how goals can be adequately formed and operationalised finally the book integrates these processes in an analytical framework for decision making

risks are an integral part of complex high stakes decisions and decisionmakers are faced with the unavoidable tasks of assessing risks and forming risk preferences this is true for all decision domains including financial environmental and foreign policy domains among others how well decisionmakers deal with risk affects to a considerable extent the quality of their decisions this book provides the most comprehensive analysis available of the elements that influence risk judgments and preferences the book has two dimensions theoretical and comparative historical the study of risk taking behavior has been dominated by the rational choice approach instead the author adopts a socio cognitive approach involving a multivariate theory integrating contextual cognitive motivational and personality factors that affect an individual decisionmaker s judgment and preferences the social interaction and structural effects of the decisionmaking group and its organizational setting and the role of cultural societal values and norms that sanction or discourage risk taking behavior the book s theoretical approach is applied and tested in five historical case studies of foreign military interventions the richly detailed empirical data on the case studies make them metaphorically speaking an ideal laboratory for applying a process tracing approach in studying judgment and decision processes at varying risk levels the case studies analyzed are u s interventions in grenada in 1983 and panama in 1989 both low risk soviet

intervention in czechoslovakia in 1968 moderate risk u s intervention in vietnam in 1964 68 high risk and israel s intervention in lebanon in 1982 83 high risk
