the principal aim of this volume is to provide descriptions of sites of special scientific
interest selected as part of the geological conservation review that yield evidence for
the pleistocene history of the river thames and its tributaries although defined
thematically the volume covers all pleistocene gcr sites in the thames valley a
number of sites in southern east anglia are also included because they provide
important evidence bearing on the history of the thames system the justification for a
gcr volume devoted to the thames lies in the special importance of the river in the
british quaternary the volume is concerned with the history of britain over
approximately the last two million years of geological time during the repeated
glacial phases of the quaternary ice age and the warmer intervals between them
many such climatic fluctuations are recorded in the deposits of the thames which
can be shown to have existed as the predominant west to east drainage line in south
eastern england throughout the pleistocene the thames has left a detailed record of
its earlier presence in the form of deposits which comprise fluviually aggraded
floodplain sediments predominantly gravels preserved on the valley sides where they
form geomorphological terrace features the oldest deposits are at the highest levels
forming a terrace staircase that records successive stages in the evolution of the
valley
