the amount of knowledge and talent dispersed among the human race has always outstripped our capacity to harness it crowdsourcing corrects that but in doing so it also unleashes the forces of creative destruction from crowdsourcing first identified by journalist jeff howe in a june 2006 wired article crowdsourcing describes the process by which the power of the many can be leveraged to accomplish feats that were once the province of the specialized few howe reveals that the crowd is more than wise it s talented creative and stunningly productive crowdsourcing activates the transformative power of today s technology liberating the latent potential within us all it s a perfect meritocracy where age gender race education and job history no longer matter the quality of work is all that counts and every field is open to people of every imaginable background if you can perform the service design the product or solve the problem you ve got the job but crowdsourcing has also triggered a dramatic shift in the way work is organized talent is employed research is conducted and products are made and marketed as the crowd comes to supplant traditional forms of labor pain and disruption are inevitable jeff howe delves into both the positive and negative consequences of this intriguing phenomenon through extensive reporting from the front lines of this revolution he employs a brilliant array of stories to look at the economic cultural business and political implications of crowdsourcing how were a bunch of part time dabblers in finance able to help an investment company consistently beat the market why does procter gamble repeatedly call on enthusiastic amateurs to solve scientific and technical challenges how can companies as diverse as istockphoto and threadless employ just a handful of people yet generate millions of dollars in revenue every year the answers lie within these pages the blueprint for crowdsourcing originated from a handful of computer programmers who showed that a community of like minded peers could create better products than a corporate behemoth like microsoft jeff howe tracks the amazing migration of this new model of production showing the potential of the internet to create human networks that can divvy up and make quick work of otherwise overwhelming tasks one of the most intriguing ideas of crowdsourcing is that the

knowledge to solve intractable problems a cure for cancer for instance may already exist within the warp and weave of this infinite and as yet largely untapped resource but first howe proposes we need to banish preconceived notions of how such problems are solved the very concept of crowdsourcing stands at odds with centuries of practice yet for the digital natives soon to enter the workforce the technologies and principles behind crowdsourcing are perfectly intuitive this generation collaborates shares remixes and creates with a fluency and ease the rest of us can hardly understand crowdsourcing just now starting to emerge will in a short time simply be the way things are done

duffy s work traces nuclear politics from the creation of a powerful subgovernment through the public lobby reforms of the late 1960s and early 1970s and the deregulatory backlash of the reagan years he demonstrates that while policies did change in the 1970s they did not change as much as other accounts have suggested and that the industry continued to receive considerable federal support the book is particularly significant for extending the discussion of nuclear policy through the bush and clinton years including the controversy over waste disposal new licensing procedures enacted in the 1992 amendments to the atomic energy act and the effects of deregulation of electric utilities amazon com viewed august 24 2020
