multitasking refers to performance of multiple tasks the most prominent types of multitasking are situations including either temporal overlap of the

execution of multiple tasks i.e. dual tasking or executing multiple tasks in varying sequences i.e. task switching in the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active component of task sets in these situations however these approaches have been rather vague regarding explanatory concepts e.g. task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and/or empirical evidence for specific subcomponents the present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations the contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and/or 3 their plasticity as a response to practice and training
